**To get maximum** of this guide, you should read it completely without skipping any single paragraph and should Note important points if you like.

*Thanks for ignoring typing and grammer errors*

There are more than 10 Lacs of students like you who are dreaming of the same colleges, same career like yours by taking JEE Mains or Advance 2017. But you should not be worried for it.

Since you are reading it, I want to make you clear about certain things.

**1.It is totally feasible to crack JEE 2017** by only working hard (so smart) and by following rules I will tell you in the few moments.

**2.After reading this guide, you will be able to know what should your plan for cracking JEE 2017, How much time I have to devote every day to crack exam, What to read and what should not.**

3.You have to have different plan but not different things to do

Remember,

The great people do not do different things, they do things differently.

**There are lots of things which are going to be changed in 2017:**

**The board criteria:** according to the news, HRD minister already cleared that the board marks will not be the factor for considering the ranks of the students in 2017. This is the great news for every student who has not performed well in the last JEE exam 2016.

**Nothing changes for Advance 2017:**

You have to be in top 20 percentile of your board exams or score more than 75% in general category. (65% in SC category).

### **Three type of candidates for JEE:**

**1. Who are in 12th and prepared in 11th class:** You have some relax, aren't you. The things will be the pieces of cake if you will work sincerely and focus on your 12th subjects. But the most important factor will be, the revision for you.

**2. Who are in 12th but did some wrong in 11th:** You are in little trouble, but you only have to focus on this article for next few minutes.

**3. Who are dropping out after 12th:** Even if you haven't read anything conceptual up to 12th. You can focus completely on the preparation. But things will be hazardous if you will not follow the guide, as I have met lots of students who made some dangerous mistakes.

### **Plan comes first:**

Franklin once said *'If you fail to plan, you are planning to fail!'*

A better and disciplined plan will keep you engaged every day and will not waste your moments while preparation. So make your best plan. Do not forget to include proper breaks, meditation, exercise, and gossips.

Of course, I can not make plan for you and no one else should do it. You know best of you and you will do it best.

Also do not be panic if you will not be able to follow your plan completely. And be happy if you will follow it more than 80%. It happens with everyone.

### **Some important factors while making a plan can be:**

1. Waking up early in the morning
2. Do not use facebook: Yes! please do not trust those who counts benefits of social media, at least for this year. You can use the same time in gossiping with real friends around you
3. Exercise, food, **revision management**, and listening songs (or music)

## **Revision Management for JEE exam 2017:**

After a good plan, or in the meanwhile the next important thing is revision plan. You forget 30% of the things after 1 hr of you read it for the first time. 20% of the things in next 1 day and 40% of the remaining in next 1 week. So the best way to remember things for long is to revise them. Every day, every week and every month.

Smart students have certain qualities which they do not tell everyone. They do visit everything they read every night before sleeping. They revise every important thing in the weekends. And of course, they do a brief revision in every month.

## **Books to select for JEE Mains (Advance - 2017):**

However there are different opinions book selection, but it actually depends on how much you are cleared for your concepts. For example, H C Verma for physics is a bible if your concepts are not clear. You should go through it's every chapter (from syllabus) and solve the numerical.

Erodov is also one of the books I once followed. R D Sharma in mathematics is also good. But the best way is to follow your teacher and what he/she say.

## **Attitude matters everywhere:**

Am I taking about Mains or the Advance! No, I am talking about every situation. Remember,

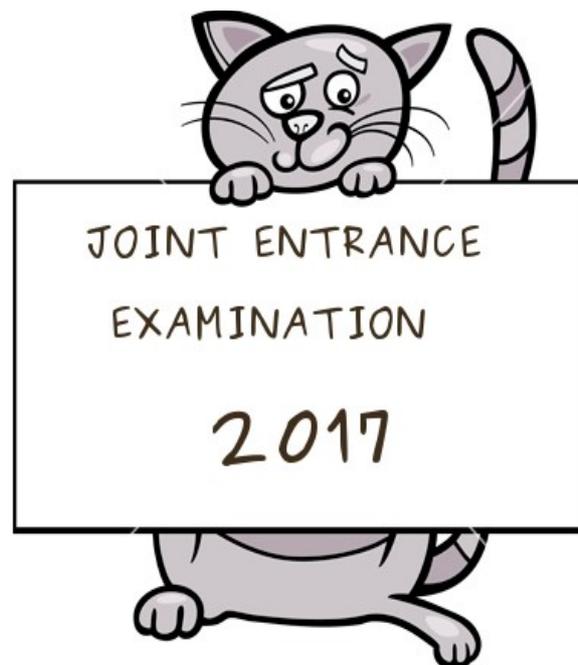

*You are working hard, you are clearing your doubts, you are doing whatever is needed then who will get success. You of course.*

**Do not prepare to pnyl qualify the exam:** Always remember that you are not preparing to qualify the exam. Prepare to do your best. And doing best is

your attitude. It comes slowly. It takes time. Probably your best is not IIT-B or NIT W. but it should be your best.

Life is way far than just a college. It's not your aim of life. Life will start after entering in college. So do not get demoralised. Do not get demotivated.

**If you are in 12th:** I have seen so many faces who ruined JEE exam as well as the board by planning wrong or by the wrong discipline. So beware and work sincerely.

**Other than study:**

1. Do make friends, share thoughts with them
2. Do not fall into the trap of coaching businesses. Select your institute wisely and work smart.
3. Work according to the plan. keep it somewhere so that your eyes will fall on it most of the time.
4. Stay healthy: giving one hr will not take anything but your illness will take your month and will effect you seriously

5. Do not lose focus.
6. Do not get distracted: By you know what I am talking about.
7. Clear your doubts.
8. Leave social media
9. Love, respect teachers and be hungry to learn new things
10. Watch good videos, stay inspired and keep smiling.

JEE is an important yet highly competitive exam for engineering. Only with a right attitude, a smart plan and working hard, you will crack it with the high marks.

***Remember the date of JEE 2017 will be only one and it will never come again in your life. So work, take the exam and celebrate your success.***

You are doing very well. You made sacrifices. Now take some time to appreciate yourself
